

## Key informations:

*Trade: Transport of fuel*

*Application: safety inspections*

*Solution: Arioflow on tablet*

*Country: France, Belgium, Africa (35 countries)*

## Benefits:

- Fluidification of the inspection process: managers / inspectors / subcontractors (transport companies)
- Increased efficiency of field agents
- Reduced administrative costs (re-keying of reports, storage, printing costs)

## About Arioflow Innovation

Arioflow publishes a cloud collaborative platform for field inspections and controls. With Arioflow, organizations and inspection specialists prevent risks, optimize quality control, reduce field operations costs, and improve the customer experience.

## The activity of TOTAL

TOTAL is the world's fifth largest internationally listed integrated petroleum group and a major player in the field of chemistry. Present on five continents, the group operates in more than 130 countries and has more than 100,000 employees.

## Challenge

Every day, TOTAL and its partners deliver the fuel to supply service stations in the countries covered by its various subsidiaries. In order to respond to the safety issues established by the group, random checks are carried out on trucks, service stations and carriers. The adoption of a mobile solution aims to automate the processing of safety inspection sheets by including all the interactions between TOTAL and its third parties (carriers and service station owners) via an application and interfaces common.

## Arioflow solution

TOTAL inspectors are equipped with tablets on which they have installed the Arioflow application from the blinds. By logging in, they synchronize with the server, access their mission orders and custom inspection forms. Once the inspections are done and the data is sent to the server, specific actions are triggered depending on the nature of the controls and the configured workflow. In the event of a serious failure identified, carriers are notified and a corrective action request is opened on a dedicated extranet. All the field data produced by the stakeholders are gathered in visual dashboards allowing managers to evaluate the performance of teams and subcontractors and to identify security trends.

« Arioflow is a reliable and sustainable solution »

says Frédéric Landrieu,

Transportation Safety Coordinator at TOTAL
